

BIM software for everyone

OUR PRODUCTS

Desktop software for different areas of the AEC industry

From architectural modelling, to the development of different specialities, all the way through to project execution.

BIMserver.center is our CDE (Common Data Environment)

Professionals can interact and exchange data during the development of a BIM project.

Augmented reality and virtual reality apps

Project participants have access to the models in real time through an immersive and interactive experience.

BIM TECHNOLOGY

BIM technology is essential to the CYPE product. All our tools have been carefully designed to maximise the potential that this technology brings to the AEC industry. The IFC standard provides the means to ensure interoperability between our tools and those developed by other brands.

SPECIALISED TOOLS

Our catalogue includes specialised tools that streamline the daily work of different types of professionals. As well as architectural modelling, our system covers structural analysis, energy efficiency, acoustic analysis, facility design and project management.

WHY CHOOSE US?

We've been developing programs for 40 years, we're present in more than 70 countries and more than 100,000 professionals use our software every day.

CODE CHECKING

Our product's essential feature is the checking of code parameters during project execution, making the most of the advantages of a digital model of the building. Our system considers more than 400 codes from countries on every continent and also allows users to set their own parameters.
